Serial No. 10/810,526

1 12. (Previously Amended) A method for alerting a
2 calling party of a delay before an incoming call will be answered
3 by a user of a called wireless handset, comprising the steps of:
4 answering the incoming call by the wireless handset in
5 response to a predefined amount of movement of the user as
6 detected by the wireless handset when the telecommunication
7 terminal is not engaged in another call;
8 muting an audio path of the answered call from
9 communication with the user; and
10 transmitting a message that is selected by the user to
11 the calling party.

1 13. (Original) The method of claim 12 further
2 comprises the step of maintaining the incoming call from the
3 calling party with the audio path muted to the user; and
4 allowing audio communication by the user with calling
5 party in response to another input from the user.

1 14. (Original) The method of claim 12 further
2 comprises the step of terminating the incoming call after
3 transmission of the message.

1 15. (Original) The method of claim 12 wherein the
2 message is an audio message and the audio message is
3 transmitted via the audio path to the calling party.

Serial No. 10/810,526

1 16. (Original) The method of claim 15 further
2 comprises the steps of receiving a time specifying the delay;
3 and
4 inserting the time into a predefined message.

1 17. (Original) The method of claim 16 wherein the
2 step of inserting comprises converting the time to audio
3 information for insertion into the predefined message.

1 18. (Original) The method of claim 17 further
2 comprises the step of recording the predefined message.

1 19. (Original) The method of claim 12 wherein the
2 message is a text message.

1 20. (Original) The method of claim 19 further
2 comprises the steps of receiving a time specifying the delay;
3 and
4 inserting the time into a predefined message.

1 21. (Original) The method of claim 19 wherein the
2 transmission of the text message is via a text messaging link.

1 22. (Original) The method of claim 20 further
2 comprises the step of entering the predefined message.

1 34. (Previously Amended) A processor-readable
2 medium for alerting a calling party of a delay before an
3 incoming call will be answered by a user of a called wireless

Serial No. 10/810,526

4 handset, comprising processor-executable instructions
5 configured for:
6 answering the incoming call by the wireless handset in
7 response to a predefined amount of movement of the user as
8 detected by the wireless handset when the telecommunication
9 terminal is not engaged in another call;
10 muting an audio path of the answered call from
11 communication with the user; and
12 transmitting a message that is selected by the user to
13 the calling party.

1 35. (Original) The processor-readable medium of
2 claim 34 further comprises maintaining the incoming call from
3 the calling party with the audio path muted to the user; and
4 allowing audio communication by the user with calling
5 party in response to another input from the user.

1 36. (Original) The processor-readable medium of
2 claim 34 further comprises terminating the incoming call after
3 transmission of the message.

1 37. (Original) The processor-readable medium of
2 claim 34 wherein the message is an audio message and the
3 audio message is transmitted via the audio path to the calling
4 party.

Serial No. 10/810,526

1 38. (Original) The processor-readable medium of
2 claim 37 further comprises receiving a time specifying the
3 delay; and
4 inserting the time into a predefined message.

1 39. (Original) The processor-readable medium of
2 claim 38 wherein the inserting comprises converting the time to
3 audio information for insertion into the predefined message.

1 40. (Original) The processor-readable medium of
2 claim 39 further comprises recording the predefined message.

1 41. (Original) The processor-readable medium of
2 claim 34 wherein the message is a text message.

1 42. (Original) The processor-readable medium of
2 claim 41 further comprises receiving a time specifying the
3 delay; and
4 inserting the time into a predefined message.

1 43. (Original) The processor-readable medium of
2 claim 41 wherein the transmission of the text message is via a
3 text messaging link.

1 44. (Original) The processor-readable medium of
2 claim 42 further comprises entering the predefined message.

1 56. (Original) An apparatus for alerting a calling party
2 of a delay before an incoming call will be answered by a
3 communication terminal, comprising:
4 means for detecting the incoming call while the
5 communication terminal is not engaged in another call;

Serial No. 10/810,526

6 means for detecting movement of the communication
7 terminal; and
8 means for transmitting a message to the calling party
9 upon detection of the incoming call and movement.

1 57. (Original) The apparatus of claim 56 wherein the
2 means for transmitting comprises means for sending a textual
3 message.
